WEB 2620 - Fall 2017 - Thomas Bell

Final Project: Proposal

Due: 14th December 2017

OVERVIEW

I will be redesigning the layout of the City Deli website, located at <http://www.citydeliva.com/>. I will be using the skills I have learned in the past semester to recreate the site using a Bootstrap framework.

GOALS

1. Recreate the basic HTML and CSS for the website
2. Apply a layout and theme using Bootstrap v4 framework.
3. Demonstrate my ability to use a customized framework and the utilities and components that are a part of Bootstrap.

SPECIFICATIONS

I will be creating a new layout for the following 7 top-level pages: index.html, weeklys specials.html, menu.html, catering.html, about.html, gallery.html, contact.html. I have plans to recreate the navigation links into a Bootstrap navbar as well as use some other Bootstrap utilities and components.

ESTIMATED TIMELINE

Nov 27 - Project Proposal

Dec 1 - Main page and layout

Dec 3- menu.html

Dec 5- catering.html, gallery.html

Dec 7- about.html, weeklys specials.html

Dec 11- contact.html and final readjustments to site*

Final Project: Evaluation Report

Due: 14th December 2017

OVERVIEW

I redesigning the layout of the City Deli website, located at <http://www.citydeliva.com/>. I used the various skills that I learned in the past semester to recreate the site using a Bootstrap framework.

EVALUATION

I redesigned 7 pages: index.html, weekly.html, menu.html, catering.html, about.html, gallery.html, contact.html. This is the first website relayout that I have done where I had made an estimated timeline to follow before I started. It was interesting trying to force myself to stick to the order of pages that I laid out beforehand instead of just skipping to the pages that I knew would be easier. I actually did end up skipping the weekly specials page in favor of doing the contact page first because I was unsure what I wanted to do with the specials page.

A big challenge of the project was that the majority of the limited photos that they had on their page where not actually placed on the page. I am not sure where the photos are located but it made it so that I could not use these photos in my project. In place of where I would normally put those photos I put placeholder images from Unsplash. Later on in the project I realized that I could have used images off of their Facebook page.

FUTURE DEVELOPMENTS

- Create a better mobile-friendly responsive site
- Add images from City Deli Facebook page into the gallery
- Replace all empty links with their respective link addresses
- Add images to the weekly specials items
- Incorporate all the customers recommendations on either a new page or on the index page in a carousel
- Finish typing up Menu and Catering menu
- Add animations on scroll throughout page
